AutoCAD can be used by anyone and is free to students and hobbyists. The free AutoCAD LT version (which is integrated with AutoCAD LT CorelDRAW) is limited to 2-D drafting. A commercial license for AutoCAD LT (or CorelDRAW) provides the full 3-D drafting capabilities. AutoCAD is also available on mobile devices, and has been ported to gaming platforms such as Apple's iPad, iPhone and Android-based tablets and phones. Editor's note: We're looking for images of the Autodesk AutoCAD LT or CorelDRAW series that represent the best work of one of your colleagues, classmates, employees or students. However, the Autodesk website provides little information about the origins of AutoCAD. The first version of AutoCAD, named AutoCAD Drafting Edition, was released in 1982 as a "separate-though-integrated" version. Autodesk's first version of AutoCAD, released in 1982, was named AutoCAD Drafting Edition. This version was released for the Apple II and TRS-80 platforms. The first versions of AutoCAD used overlays to simplify the drawing interface and the user's drawing process. An overlay refers to a rectangular area on the screen that enables drawing information to appear and disappear as the user performs different drawing functions. Overlays are visible and therefore reduce clutter. Overlays are most useful when the user is working on a complex drawing. The first version of AutoCAD was released in the 1980s, and it was a standalone application. However, in 1998, it became a part of CorelDRAW. The first version of AutoCAD, released in the 1980s, was very small and only supported 2-D drawing. A whole new world of 3-D drafting features came to life in the 1990s. The 3-D features, such as blocks, allows the user to view parts of the drawing from a variety of angles and positions. While the 3-D drafting functionality came to life in the 1990s, AutoCAD continued to evolve, with new features and enhancements. In 2018, AutoCAD LT was

Part of AutoCAD's object model is XML; there are XML viewers available to display/edit the XML elements. This format is used to create and edit AutoLISP functions. Lisp, or Autodesk Application Development Language (ADL), is a programming language used to create and customize AutoCAD applications. This is also known as 'AutoLISP'. It is an interpreted language, using a compiler, and is used to write AutoLISP scripts. It also uses its own XML format. In 2015, Autodesk announced the end of life of AutoLISP. Visual LISP Visual LISP was the previous programming language used to create AutoCAD extensions. It was also based on XML, and is the original programming language for AutoCAD. XML files are used to store the information about extensions, and are used to load these extensions into AutoCAD. Visual LISP is not directly supported by Autodesk, but the ability to read and write XML files is included in AutoCAD for programming purposes. Visual LISP is interpreted, while AutoLISP is compiled. Visual LISP files can be created in a Notepad application, or with an XML editor. Visual LISP also uses an XML format to store the information about extensions, but it does not use the AutoLISP XML format. AutoLISP is also used to create add-ons for other CAD programs. Examples of such programs include MicroStation, ArcGIS, Rhinoceros and SketchUp. VBA AutoCAD supports a language called Visual Basic for Applications. This is based on Visual Basic and is used for VBA add-ons in AutoCAD. VBA is a compiled programming language and is used to add and modify AutoCAD functionality. VBA extensions are stored in a Visual Basic for Applications worksheet, and can be used for adding or modifying AutoCAD. The VBA scripting language is different from VBScript, which is based on the JavaScript programming language. .NET AutoCAD also supports extensions written in .NET programming language and the Microsoft Framework. Autodesk Exchange Apps Autodesk Exchange Apps are AutoCAD plugins which are distributed through the Autodesk Exchange App Store. Currently, they are a part of a comprehensive version of AutoCAD called 'AutoCAD Architecture'. Aut a1d647c40b
