output.setFormatter(new DateFormat("yyyy/MM/dd HH:mm:ss z")); and then I have a function to check if the inputted date is valid or not: public void validateDate(TextView output) { String strDate = output.getText().toString(); try { SimpleDateFormat sdf = new SimpleDateFormat("yyyy/MM/dd HH:mm:ss"); sdf.parse(strDate); //format the date to mm/dd/yyyy output.setText("" + sdf.format(new Date())); } catch (ParseException e) { e.printStackTrace(); } System.out.println("enter is valid or not" + output); } the output is then set to textview as shown above. A: The easiest way to add multiple formatters is to have an object for the formatters and then call a setFormatter method that gives you both, on initialization.
