Latest PC Game of : Jurassic World : A New Frontier - PC. Bc08 gpl game crack download. (Crack) Free Download Full Version Sett For Iphone 4.Q: Forcing differences in NSManagedObject's properties when NSFetchedResultsController changes To keep a table view cell updated when its NSFetchedResultsController changes, the table view's datasource is set to a NSFetchedResultsController. However, when the NSFetchedResultsController changes the fetched data, for instance, if the data was fetched by a fetch request using the NSFetchRequest method NSFetchRequest *fetchRequest =...; NSSortDescriptor *descriptor = [NSSortDescriptor sortDescriptorWithKey:@"name" ascending:YES]; fetchRequest.sortDescriptors = [NSArray arrayWithObject:descriptor]; the [NSFetchedResultsController] does not detect the changes. When a NSManagedObject property changes, its setter method is called. However, the setter method will always execute the same code in response to a change in property. What I would like to do is to keep a manual KVO (key-value observing) alive in the background so that whenever a property of one of my objects changes, the property of the table view cell is automatically updated. One alternative is to set up a NSManagedObjectContext observer myself, but I really would like to know if there is a better approach. A: As you say, the setter will always execute the same code. This is because its internal KVO notification is sent to the object's registered observers. For example: @interface MyObject : NSManagedObject { int _myInt; } @property int myInt; @end @implementation MyObject @dynamic myInt; - (int)myInt {
