Essential: Adobe Photoshop Elements If you only need to alter some of your photos, or if your budget is at a minimum, you can check out Photoshop Elements, which is a powerful free program that offers most of the features of Photoshop. It is easier to use and control than Photoshop without requiring a large investment of time and money. Photoshop has a lot of power, but it requires a certain level of technical knowledge to truly understand it. Before diving into the program, first consider other programs to choose from. You can use Photoshop Elements, for instance, but it's a far less expensive and powerful program than Photoshop. In this chapter, you can follow along with the steps I show you, but you can also skip around the steps, or you can follow along with the book's companion DVD. Part II: Preparing Digital Images with the Lens Correction Filter In this part, I cover the following topics: Getting familiar with Lightroom and how it compares to Photoshop Getting to know the Lens Correction Filter Practicing how to use the Filter Preparing a digital image for printing A big part of the reason we use a DSLR in the first place is that it gives us the ability to take photos that look great when printed. Printing is a critical part of photography. A good print can bring a digital image to life in a way that a photo from a point-and-shoot or a smartphone just can't do. Chapter 8 describes the process of printing, and Chapter 9 gives you the lowdown on high-resolution printers. But even if you have a printer, you can't print photos that look good unless you fix them. In this part, I show you how to use the lens correction filter in Adobe Lightroom and Photoshop, and I provide some tips for how to use it to fix images on your computer. It's free for personal use and can be yours at no cost. This part is a must! Don't skip this part. If you haven't already, go to the CD-ROM that accompanies this book or go online to [www.Dummies.com/Go/DigitalCameraPhotography](http://www.Dummies.com/Go/DigitalCameraPhotography) or [www.Dummies.com/go/CanonDigitalImaging](http://www.Dummies.com/go/CanonDigitalImaging) to check out all the helpful, free information there! Getting Familiar with Lightroom and How It Compares to Photoshop If you're new to Lightroom, I recommend that you first watch the video tutorials on the DVD, which

A wide variety of different types of structures used to store items are known. These structures include, for example, tents, tarps, common utility awnings, pergolas, and other structures. Many of these structures are used to provide shade over items stored within the structure, such as items resting on a supporting surface, for example, a bed, table, floor, or the like. Many of these structures use a fabric that is either attached to, or substantially wrapped around, supporting members, such as posts and beams to provide shade. In some instances, these structures are difficult to erect or to maintain in an assembled state. Some structures are also difficult to maintain or to fold flat for storage or transport. For example, many structures that provide shade and shelter may be difficult to lower to ground level, or reposition after being lowered to ground level, due to a complicated folding structure and system. In many instances, the resulting structure may also be relatively expensive to manufacture. Other known structures for covering items are more simplified and require fewer parts and therefore may be less expensive to manufacture, and may be easier to fold for storage. However, many of these structures do not provide sufficient shade and/or shelter or protection for the items that they cover. Many of the structures that do provide sufficient shade and/or shelter or protection for the items that they cover are of a relatively large size, which may increase the cost of transporting and storing such structures. In addition, in many of these conventional structures, a tarpaulin must be placed over the supporting framework of the structure, or over the items to be stored, which may not be practical in some situations, such as over a bed. Alternatively, the items may be wrapped in or covered with additional sheet material, but such methods may be impractical for various items, such as bed linens, or the like.
