MPLAB XC8 C Compiler User's Guide; Table of contents; Preface. Rarely can there be a code of one hundred. This rarely happens with 8-bit PIC devices. But at the same time, at the same time, at the same time, something is not happening. It's not often that you come across code that can be over 1000 lines long without sacrificing readability. In such cases, the XC8 compiler can be used to compile this code. XC8 can generate code for all PIC devices, both 8-bit and 16-bit. It uses 8-bit data, so it can only use 2 bytes to produce 16-bit code, which is 32×16 (or $8 + 8$) = 64 bytes.
